VERNER ARCHITECTS IS a boutique architecture firm that specializes in custom residential and small-scale commercial projects. Based in Oakland, California and working across the country, they offer a complete range of services for both new construction and renovation projects, from basic conceptual ideas to detailed design and build services. Their work considers light, material, and massing to create innovative design solutions that are tailored to how their clients will live and inhabit a space.

ABOVE: A Spacious and family-oriented modern home for a family of five. Converted from a dated 1950's ranch house with a tight budget and code limitations. The Verner team maximized the footprint with a loftstyle great room, a vaulted ceiling, and a sunlit open floor plan.

RIGHT: Space is maximized with a kid's loft perched over the entryway. Additional clerestory windows allow plentiful light to flow into the great room, with an open floor plan that organically flows from the entry through to the rear patio, creating a seamless connection to the outdoors.
